

MailStore Server[®]

The Standard in Email Archiving

MailStore Server allows small and medium-sized businesses to benefit from all of the legal, technical, and financial advantages of legally compliant email archiving.

MailStore Server combines powerful technology with low costs, minimal system requirements, and an easy setup procedure.

Advantages for Companies

Prevent Data Loss

MailStore Server enables the central, secure, and complete storage of all emails for any length of time, delivering reliable protection against data loss.

Reduce the Workload of the Email Server

MailStore Server reduces the workload of the email server by relocating old emails, providing flexible storage management, and reducing storage requirements.

Use Emails Efficiently

Users can continue to access their emails within their familiar working environment (e.g., Microsoft Outlook) faster than ever.

Compliance with Regulatory Requirements

MailStore Server is a powerful tool for implementing a dependable email compliance strategy while also satisfying the regulatory and eDiscovery requirements.

Simplify Backup and Recovery

MailStore Server reduces email server backup and restore times. Users can also recover lost emails themselves using one-click restore.

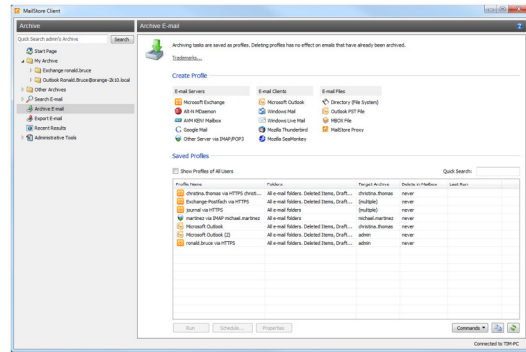

Backup PST Files

PST files are prone to error and difficult to manage. This problem can be permanently solved by centrally archiving all PST files.

Flexible Archiving

MailStore Server supports most common email sources. The archiving strategy can therefore be custom tailored based on the specific detailed needs of a company.

- Archiving of existing mailboxes, public folders, and PST files
- Archiving of all emails as they are received and sent
- Emails can be deleted from mailboxes once they have been archived according to a rule-based process

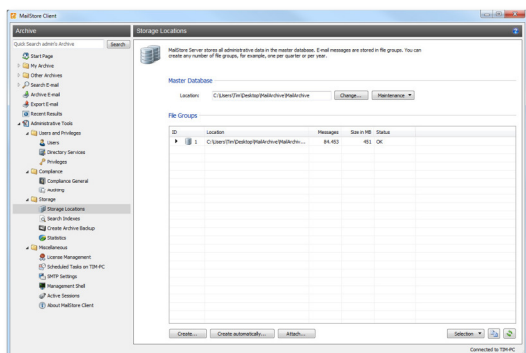

Supported Email Sources

- Microsoft Exchange Server 2003, 2007, and 2010 (incl. SBS)
- Hosted Exchange
- Microsoft Office 365
- MDAemon Messaging Server
- Any IMAP- or POP3-compatible email server or mailbox
- Email clients such as Microsoft Outlook and Mozilla Thunderbird
- PST and other email file formats

Scalable Storage Technology

At the core of MailStore Server is a highly sophisticated storage technology that does not require an external database management system and is available immediately after setup is complete. MailStore Server appears to users as a main archive which it assembles from any number of individual archive stores. Archive stores are created by default in the file system and do not require any further configuration.

This concept makes flexible storage management possible and also guarantees scalability to any volume of data and number of users. In practice, this allows for installations that support more than a thousand archived mailboxes and the users who access them.

Reliable Compliance Features

A comprehensive technology concept ensures that companies using MailStore Server are able to comply with regulatory or business record retention requirements at all times.

- 100% complete archiving of all emails possible
- Tamper-proof thanks to AES256 encryption, SHA1 hash values, and other measures
- Integrated auditing system delivers seamless logging and transparency
- All emails can be restored from the archive in standard formats (e.g., as RFC822) at any time

Fast Access for All Users

When accessing the archive, users can perform a full-text search (including all file attachments) or use the regular folder structure. Emails can be recovered using one-click restore or simply opened to forward the message or send a reply.

MailStore Outlook Add-in

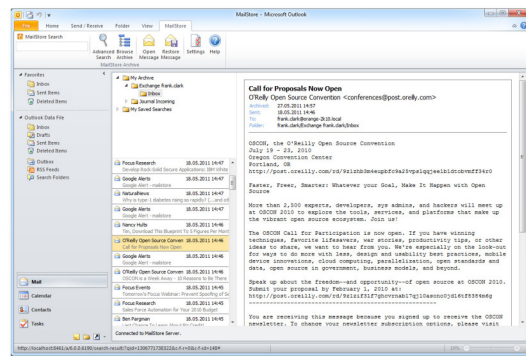

Seamless integration in Microsoft Outlook

MailStore Web Access

Access using any internet browser

MailStore IMAP Server

Integration of the archive as a read-only mailbox into any email program or onto a mobile device via an integrated IMAP server

Strong Market Presence

With thousands of customers, MailStore Server is one of the world's leading email archiving solutions and is used by small and medium-sized businesses from all sectors as well as global companies. Moreover, countless public and educational institutions rely on MailStore technology.

Low Costs

MailStore Server's integrated storage technology does not require an external database server and is available for use immediately after setup. Its low setup costs and minimal system requirements reduce the overall costs to a minimum, making it the perfect solution for small businesses too.

Try Now

The 30-day trial version of MailStore Server can be installed in just a few minutes on any Windows PC (or virtual PC) and tested immediately. No changes will be made to your email server or emails at any time during archiving.
